

How To Open The Dashboard

The dashboard is one file. Its name ends in .html.

Here is how to open it.

1. Find the file in the Hydronomics folder on Google Drive.
2. Right click the file and choose Download.
3. Look in your Downloads folder for the file.
4. Double click it. It opens in your web browser.

That is all you need to do.

A note about Google Drive

Google Drive shows a preview when you click the file.

The preview will not display the dashboard. That is normal.

Always download the file first. Then open the downloaded copy.

When there is an update

We save a new copy in the same folder each time.

Download the fresh copy whenever there is an update.

Open the newest download to see the latest numbers.
